Who is this course for?

- If you have an interest in environmental management or sustainability for a workplace environment.
- Interested in looking at carbon footprints, reducing waste, and policies and procedures involving environmental management and sustainability.
- Be able to measure and address enterprise impacts on air, water and other external environmental conditions.
- Entrepreneurial individuals looking to launch their own business considering sustainability standards.
- Business managers or business owners who are interested in becoming qualified and improving the sustainability standards of the business.

This qualification is a perfect pathway towards environmental management.

Here's what one of our students thinks...

"I now understand financials a lot better. I will now keep better records more details and keep a close eye on sales an more often and record more. Through the training process I have learnt to be thinking ahead, to writer down strategies and to measure success. I now have more confidence in my business decisions based on fact now rather than instinct."

Helen Gosse

Where can this course take you?

With growing populations globally, managing environments to ensure sustainable use of resources and conservation is more important than ever. With key issues facing us today like global warming, pollution, deforestation, extinction of habitats and species, new careers are opening up as we aim to preserve our future. Launch your career in environmental management with a local, national and international focus.

Understand how to critically analyse issues, solve problems, and communicate effectively with others as you tackle current and future environmental issues and develop sustainable solutions. This course aims to provide you with a solid foundation in the fields of climate change, environmental management and earth science.

It also aims to give you valuable and high in demand skills in environmental management. Understand the risks a changing climate presents to communities, businesses and the natural environment, and the economic opportunities for new sustainable industries.

*Accurate as 18/03/22. For the latest information see [our webpage](#).
